TECHNICAL INFORMATION

The gateway is the interface between the wireless data logger and the server software. It can manage up to 60 data loggers simultaneously, collecting all wireless-logger measurement data, and passing them on to the server software. When several gateways are used in the same network, they are configured redundantly. If one gateway should fail, the measurement values are automatically sent to the server software via another gateway.

Compatible with:

- RMS LOG RMS data logger
- RMS MLOG RMS mini-logger
- RMS-WEB On-premises software
- RMS-CLD SaaS solutions
