

⚡ CT6904A-2 / CT6904A-3

AC/DC CURRENT SENSOR

Maximum rating 800A, ultra-high-stability, high-accuracy, wideband DC to 4MHz/2MHz, high-CMRR, high-performance fluxgate technology, pass-through type

Features

- 12.5 ppm linearity
- 10 ppm offset
- Voltage output
- CT coil structure for broadband and superior frequency characteristics
- Built-in machined solid shield aluminum for excellent noise resistance (high CMRR)
- Aperture $\phi 32$ mm for cables and bus-bars
- The Power Analyzer PW8001 or the Data Logger LR8101, LR8102 with the Power Measurement Module M7103 automatically recognizes the current sensor's information (phase shift data, sensor model name, rated current, serial number) when connected.

Applications

- Measurement of loss in high-frequency reactors
- Automotive (e.g. xEV inverter motors)
- Efficiency measurement of high-efficiency energy converters
- Analysis of industrial inverter motors
- Calibration of shunt resistors
- Measurement of minute superimposed current in battery systems
- For feedback control in medical devices (MRI, CT, X-ray)

Specification highlights	Symbol	Unit	Min.	Typ.	Max.
Nominal primary DC current	IPN DC	A	-800		800
Nominal primary AC current	IPN AC	Arms			800
Measurement range	IPM	A	-800		800
Nominal output voltage	V _{out}	V	-2		2
Primary / secondary ratio	Ratio	V/A	0.002	0.002	0.002
Linearity error	ϵ_L	ppm		± 12.5	
Offset error	ϵ_O	ppm		± 10	
Bandwidth (± 3 dB)	f	MHz		CT6904A-2: 4 CT6904A-3: 2	
Withstand voltage (1mA, 50 / 60Hz for 1minute)	U _d	kV			7.4
Power supply voltages	U _c	V	± 11.5		± 12.5
Operating temperature range	T _A	°C	-10		50
Output cable length	L _{cabl}	m		CT6904A-2 : 3m CT6904A-3: 10m

AC/DC CURRENT SENSOR

⚡ Electrical specifications at T_A = 23°C ±5°C, supply voltage (by using external PSU) = ±12 V unless otherwise stated

Parameter	Symbol	Unit	Min.	Typ.	Max.	Comment
Nominal primary DC current	I _{PN} DC	A	-800		800	Refer to "Figure 1. Frequency derating"
Nominal primary AC current	I _{PN} AC	Arms			800	Refer to "Figure 1. Frequency derating"
Measurement range	I _{PM}	A	-800		800	Refer to "Figure 1. Frequency derating"
Maximum input current	I _{MAX}	A _{peak}	-1200		1200	Not exceeding derating curve shown in Figure 1 However, it is allowable for up to 20 ms at 40°C or less
Nominal output voltage	V _{out}	V	-2		2	
Primary/secondary ratio	Ratio	V/A	0.002	0.002	0.002	
Bandwidth (-3dB) CT6904A-2 CT6904A-3	f	MHz		4 2		Refer to "Figure 2. Frequency characteristics"
Output resistance		Ω	40	50	60	
Input impedance		mΩ		2.5		100 kHz
Linearity error	ε _L	ppm		±12.5		Refer to "Figure 3. Linearity error characteristics"
Offset error	ε _O	ppm		±10		
Output noise	noise	μVrms			300	Measurement bandwidth: DC to 1MHz
Effects of temperature Amplitude sensitivity Offset voltage Phase		ppm of reading/°C ppm of full scale/°C ±°/°C	-50 -5 -0.01		50 5 0.01	Within the range of -10°C to 18°C or 28°C to 50°C
Effects of magnetization		mA			5	Input equivalent, after 500A DC is inputted
Common mode rejection ratio 50/60 Hz 100 kHz	CMRR	dB	140 120			(Effect on output voltage/common-mode voltage) Refer to "Figure 4. CMRR characteristics"
Effects of conductor position 50/60 Hz 100 kHz		% of reading	-0.01 -0.2		0.01 0.2	When wire of outer diameter 10 mm is used Refer to Figure 5. Effects of conductor position (typical) at 100 kHz
Effects of external magnetic field		mA			100 100	Input equivalent, under a magnetic field of 400 A/m, DC Input equivalent, under a magnetic field of 400 A/m, 60 Hz
Effects of radiated radio-frequency electromagnetic field		% of full scale			0.625	10 V/m
Effects of conducted radio-frequency electromagnetic field		% of full scale			0.25	10 V
Fluxgate excitation frequency	f _{Exc}	kHz		10.4		
Power supply voltages	U _C	V	±11.5		±12.5	
Positive current consumption	I _{ps}	mA			450	DC + 800 A with ±12 V
Negative current consumption	I _{ns}	mA			-450	DC - 800 A with ±12 V

⚡ Isolation specifications

Parameter	Unit	Value	Comment
Rated insulation RMS voltage, basic insulation	V	1000	IEC 61010-1 conditions
Rated insulation RMS voltage, reinforced insulation	V	1000	• over voltage cat III • pollution degree 2
RMS voltage for AC isolation test, 50/60 Hz, 1minute	kV	7.4	Between primary and secondary (and shield) Sensed current: 1 mA
Clearance	mm	20.7	Shortest distance through air
Creepage distance	mm	20.7	Shortest path along device body
Comparative tracking index (CTI)	V	< 250	Performance level category (PLC)= 3
Standards			Safety: EN 61010 EMC: EN 61326

AC/DC CURRENT SENSOR

Environmental and mechanical characteristics

Parameter	Symbol	Unit	Min.	Typ.	Max.	Comment
Operating environment (altitude)		m			2000	Indoor use, pollution degree 2
Ambient operating temperature range	T _A	°C	-10		50	
Ambient storage temperature range	T _{Ast}	°C	-20		60	
Relative humidity	RH	%			80	Non-condensing
Dust resistance and water resistance			IP20			EN 60529
Measurable conductor diameter	D _{meas}	mm			32	
Dimensions	W H D	mm		139 120 52		Refer to "Figure 6. Dimensions"
Output cable length CT6904A-2 CT6904A-3	L _{cable}	m		3 10		
Mounting hole diameter	D _{mout}	mm		Φ5.2		M5 screw, recommended tightening torque: 1.5 Nm to 2.0 Nm
Weight CT6904A-2 CT6904A-3	m	kg		1.15 1.45		

Measurement accuracy (total accuracy including uncertainty in calibration system etc.)

Frequency [Hz]	Amplitude		Phase [°]
	[±% of reading]	[±% of full scale]	
DC	0.03	0.009	-
DC < f < 16	0.2	0.025	0.1
16 ≤ f < 45	0.1	0.025	0.1
45 ≤ f ≤ 65	0.025	0.009	0.08
65 < f ≤ 850	0.05	0.009	0.12
850 < f ≤ 1 k	0.1	0.013	0.4
1 k < f ≤ 5 k	0.4	0.025	0.4
5 k < f ≤ 10 k	0.4	0.025	0.08 × f
10 k < f ≤ 50 k	1	0.025	0.08 × f
50 k < f ≤ 100 k	1	0.063	0.08 × f
100 k < f ≤ 300 k	2	0.063	0.08 × f
300 k < f ≤ 1 M	5	0.063	0.08 × f
Frequency range	4 MHz/2 MHz (CT6904A-3) (±3dB typical)		-

Electrical specifications at T_A = 23°C ±5°C, supply voltage (by using external PSU) = ±12 V unless otherwise stated

- The variable f in accuracy equations is expressed in kHz.
- Accuracy in range of DC < f < 10 Hz are design values.
- For the CT6904A-3, add the following values to accuracy in the range of 50 kHz < f ≤ 1 MHz.

Amplitude accuracy: ±(0.015 × f [kHz])% of reading

- Combined accuracy with HIOKI power analyzer PW8001 and PW6001 is specified (DC, 45 Hz ≤ f ≤ 65 Hz). For details of combined accuracy, refer to the instruction manual (<https://www.hioki.com/download/38351>).

Definition of on accuracy

(total accuracy including uncertainty in calibration system etc.)

Reading (displayed value) error:

Indicates the value displayed by the instrument. Limit values for reading errors are expressed as a percentage of the reading ("%" of reading" or "% rdg").

Range error:

Indicates the instrument's range. Limit values for range errors are expressed as a percentage of the range ("%" of range").

Full scale (rated current) error:

Indicates the rated current. Limit values for full-scale errors are expressed as a percentage of full scale ("%" of full scale" or "% f.s.").

Calibration:

The accuracy of HIOKI products includes all factors that affect the measurement results, such as calibration system errors, ambient temperature, and secular change, as "uncertainty".

HIOKI is accredited as an official ISO/IEC 17025 calibrator.

CT6904A-2 / CT6904A-3

AC/DC CURRENT SENSOR

Specific accuracy calculation example

How to measure the current of **DC 700 A** of a conductor with a diameter of $\phi 30$ mm or less with high accuracy.
Guaranteed specifications at $T_A = 23^\circ\text{C} \pm 5^\circ\text{C}$

Measuring instrument configuration	CT6904A-2,CT6904A-3	CT9555	L9217 + 9704	DM7276
External view				
Range (connection)	800 A (1.6 V)	Front OUTPUT terminal (BNC terminal)	✓	10 V
Output voltage	$700\text{ A} \times 1.6\text{ V} / 800\text{ A} = 1.4\text{ V}$			-
Error (reading)	0.03%	-	-	0.0009%
Error (full scale)	0.009%	-	-	12 μV
Total error	$1.4\text{ V} \times (0.03 + 0.0009)\% + 1.6\text{ V} \times 0.009\% + (12\text{ }\mu\text{V} \times 10^{-6})\text{ V} = 0.0005886\text{ V}$			
Total error (input equivalent)	$0.0005886\text{ V} / 1.6\text{ V} \times 800\text{ A} = 0.2943\text{ A}$			
Error range	$700\text{ A} \pm 0.2943\text{ A} \rightarrow 699.7057\text{ A to } 700.29437\text{ A}$			

Definition of linearity error

Linearity error ε_L :

Indicates that the output (current or voltage) changes linearly in response to the input current.

A regression line is attained by measuring the output voltage in the sequence below in 200 A intervals:

+800 A $\rightarrow$ 0 A $\rightarrow$ -800 A $\rightarrow$ 0 A $\rightarrow$ +800 A

It is defined as the difference between the regression line calculated from the above measurements and the measurement points.

Definition of offset error

Offset error ε_O :

Specified by the ratio of the average value (μ) of the measured values of the offset voltage and the rated current (I_{max}) of each current sensor.

$$\varepsilon_O = \mu / I_{max} [\text{ppm}]$$

Definition of amplitude error

Amplitude error ε_G :

An index showing the degree of flatness of the frequency characteristics of gain.

DC error is defined as (linearity error + offset error).

AC error is defined as deviation from the 55 Hz measurement point.

$$\varepsilon_{GDC} = \varepsilon_L + \varepsilon_O [\text{ppm}]$$

$$\varepsilon_{GAC} = \frac{\text{Gain}(f) - \text{Gain}(55\text{ Hz})}{\text{Gain}(55\text{ Hz})} \times 100 [\%]$$
